DOCUMENT INTELLIGENCE & IDENTITY VERIFICATION

DocuFii

Extract. Verify. Understand. Turn any document, and any identity, into a decision you can defend.

Document intelligence, Home Affairs identity verification, liveness and face match, KYC, KYB and AML screening — one API, one portal, one audit trail. Built for South African lenders, insurers and enterprises that must verify at scale and prove it later.

- Document intelligence
- Home Affairs verification
- Liveness & face match
- KYC & KYB
- AML screening

ENQUIRIES

sales@deistech.co.za · +27 82 761 9921

WHY DOCUFII

Verification is the slowest step in every journey you run.

A customer sends a photo of an ID and a bank statement. Somewhere behind the scenes a person opens both, squints, re-types the numbers into a form, calls a bureau, checks a name against a list, and files the evidence in a folder no auditor will ever find. Multiply that by every application, claim, account and supplier — and it is the reason onboarding takes days instead of minutes.

DocuFii replaces that with one API and one portal. Documents come back as structured, decision-ready data. Identities are verified against the Department of Home Affairs with liveness and a 1:1 face match. Companies, directors and deeds are checked in the same place — and every step lands in an audit trail built for POPIA, FICA and the NCA.

Seconds

Not days — straight-through verification where the evidence clears, exceptions only where it doesn't.

One vendor

Documents, identity, KYC, KYB and screening on a single contract, key and invoice.

Provable

Every check, verdict and confidence score captured for the regulator and the courtroom.

DOCUFII REPLACES

Manual capture
Typing fields off a photo.

OCR point tools
Text dumps you still have to interpret.

A separate ID vendor
A second contract and a second portal.

Bureau logins
Company, deeds, credit and trace, one site at a time.

→ THE SHIFT

From reading documents and hoping, to receiving decisions and evidence.

ONE PLATFORM

Six capabilities. One key.

Each capability stands on its own — and each is stronger beside the others, because they share one customer record, one consent position and one evidence trail.

Document intelligence

28 endpoints across typed processors and a schema-driven extractor. Bank statements, payslips, IDs, invoices and 22+ further document families — returned as validated JSON with derived signals, not raw OCR text.

Identity verification

Live Department of Home Affairs verification with photo, plus a cache-first snapshot path. Liveness detection and a 1:1 face match against the retrieved Home Affairs photo.

KYC onboarding

Packaged verification journeys — ID document, Home Affairs, face match, liveness, proof of address, bank-account verification (AVS) and an audit-ready report. Used per component or bundled.

KYB and business checks

CIPC company reports and status, director enquiries, deeds, commercial trace and credit reports — assembled into a KYB summary with a risk view for supplier and counterparty onboarding.

Screening and compliance

AML, PEP and sanctions screening alongside the identity result, with configurable retention, consent and deletion behaviour aligned to POPIA, FICA, GDPR and the NCA.

API and no-code portal

One REST API and one subscription key — plus a browser portal for teams who need verification today without an integration. Same platform, same audit trail, same invoice.

SHARED SERVICE

The verification layer for every Deis platform

DocuFii is a shared service. CollectIQ, GovernIQ and IndigentIQ call it wherever they need to read a document or verify a person or company — and you can use it on its own through the API or the portal.

CollectIQ · GovernIQ · IndigentIQ

Use the whole platform, or only the part you need

Every service stands on its own, so you can start with Home Affairs verification and add document intelligence, KYB or screening later — without a new contract, key or integration.

DOCUMENT INTELLIGENCE

Decisions, not OCR text.

Two complementary API families sit behind one subscription. Reach for a typed processor when you know the document and want the deepest structured output; reach for generic read and extract for anything else, custom field schemas and high-volume batches.

OCRV2 · TYPED PROCESSORS

Deep, decision-ready extraction

- **Financial.** Bank-statement analysis and per-transaction categorisation across page breaks; payslips reconciled gross-to-net; affordability and lending analytics.
- **Identity.** SA national ID, smart-ID card, passport, driver's licence and six civil-certificate types.
- **Commerce.** Invoice and receipt extraction to line-item JSON.
- **Matching.** ID-to-value, face and address matching, each with a verdict and a confidence score.
- **Auto-route.** One endpoint detects the document type and dispatches it.

OCRREAD · GENERIC READ & EXTRACT

Any document, any schema, at scale

- **Read.** Plain text plus optional layout from any single document.
- **Extract.** OCR to a field schema you supply, across 22+ document families.
- **Batch.** Up to 10 documents synchronously in a single call.
- **Async.** Submit up to 1,000 documents and poll a job for results — portfolio-scale processing.

POST /api/ocr/v2/lending/analytics — ILLUSTRATIVE · SAMPLE DATA

```
{
  "income": { "net_monthly": 28450.00, "match": 0.97 },
  "affordability": { "disposable": 9120.50, "dti": 0.31 },
  "fraud": { "tamper": "none", "score": 0.04 },
  "decision": "PASS"
}
```

A payslip and a bank statement go in; verified income, disposable income, a debt-to-income ratio, a tamper signal and a decision come out — as JSON your decision engine can read directly. The applicant figures shown are fictional sample data.

28
Endpoints across the two families.

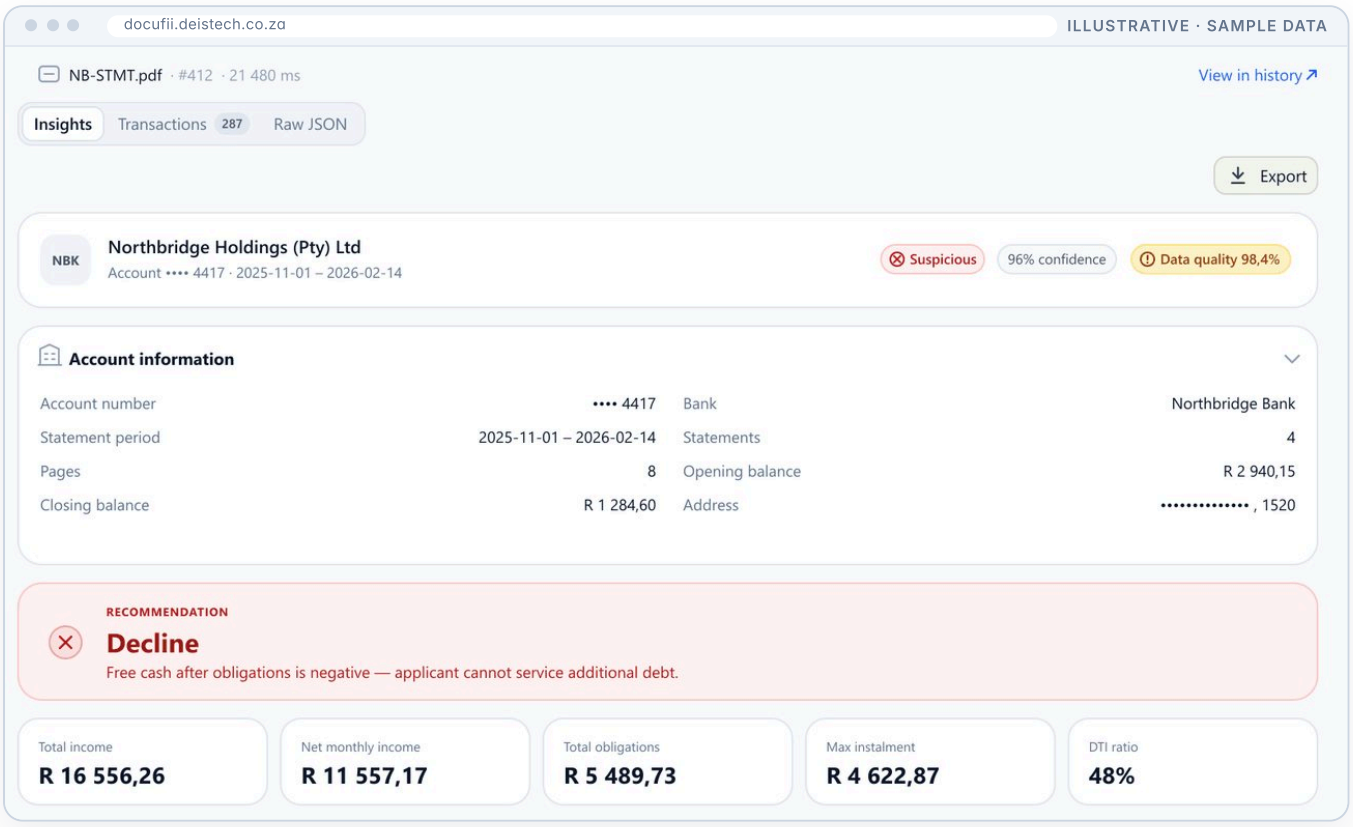

22+
Schema-driven extract families, and a growing library.

1,000
Documents per asynchronous job.

BANK STATEMENT INTELLIGENCE

One bank-statement call. Everything included.

Others treat categorisation, fraud screening and affordability analytics as separate products. DocuFii returns all three in the single multi-page response — there is no analytics upsell.

Bank statement intelligence. A four-statement upload read into account details, a confidence and data-quality score, a fraud flag and a recommendation, with income, obligations, maximum instalment and DTI alongside.

CATEGORISATION

Every line item classified

Income, debt repayment, essential and discretionary spend. Salary deposits identified and confirmed as recurring, with the employer name where present.

FRAUD & TAMPER

Flagged before the decision

Document integrity, font and metadata inspection, arithmetic reconciliation of running balances, and detection of edited or re-rendered pages.

ANALYTICS

Affordability, computed

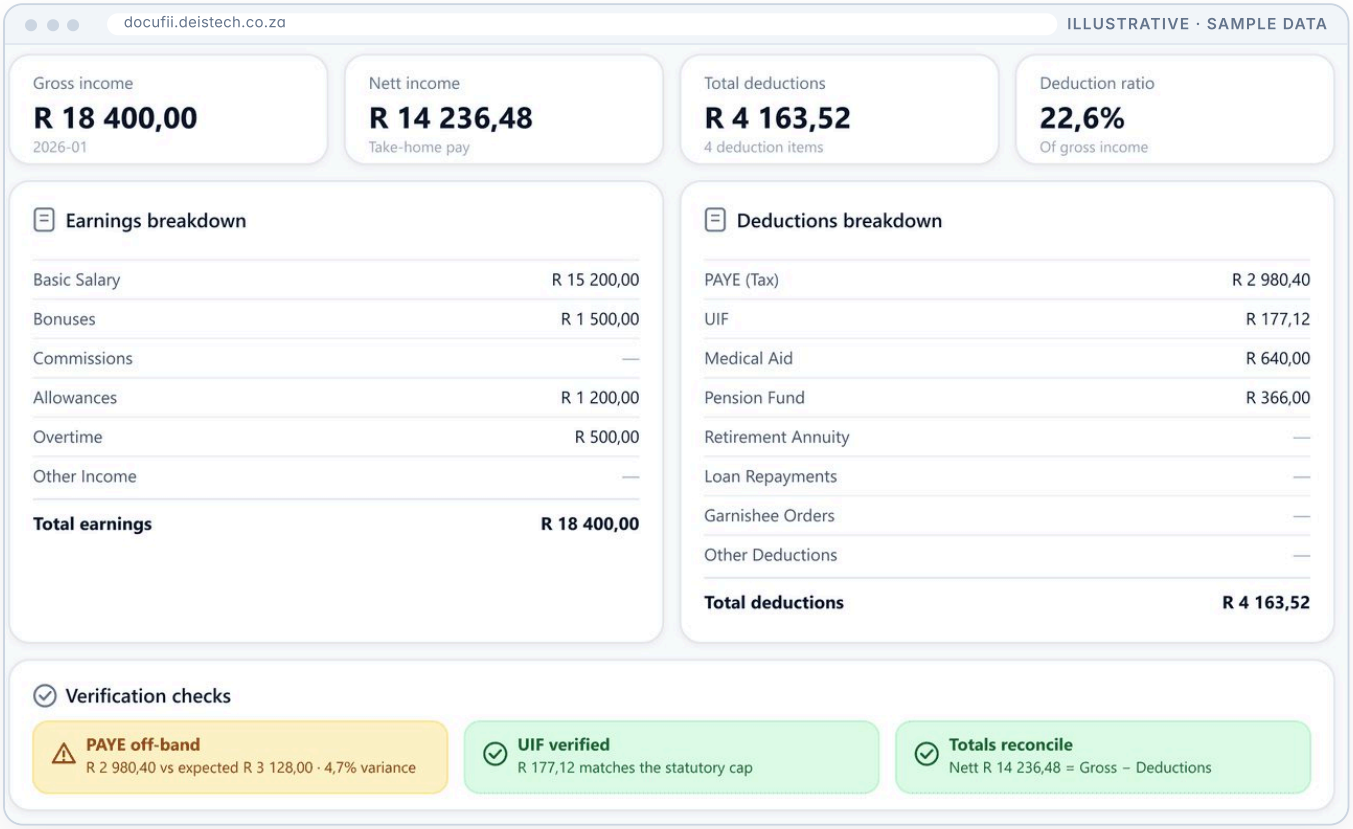

Net and gross monthly income, affordability and disposable income, debt-to-income ratio, existing obligations and balance volatility across the period.

Screens are captured from the DocuFii portal using fictional sample documents. Every company, account and figure shown is sample data.

PAYSLIPS, LENDING ANALYTICS AND MATCHING

The payslip, checked against the statement — and the law.

Payslips are reconciled gross-to-net and checked line by line. Match a payslip to the bank statement and DocuFii returns the income match, the debt-to-income ratio and a refer or decline signal in one response.

Payslip extraction. Gross, net, deductions and deduction ratio, the full earnings and deductions breakdown, and verification checks — here an out-of-band PAYE amount flagged, UIF checked against the statutory cap and totals reconciled.

Lending analytics

Payslip versus statement: income match, DTI and a refer or decline signal.

ID match

Compare an extracted ID to the values you supply — a verdict and a score per field.

Address match

Match a person to a proof-of-address document, by name and address.

Catch what passes a human eye

Running-balance arithmetic that doesn't add up, a payslip whose gross-to-net is impossible, a name on the statement that isn't the applicant's, a document whose pixels have been edited. Tamper flags and confidence scores arrive before the reviewer does.

IDENTITY VERIFICATION

Home Affairs verification, routed cache-first.

Every verification is checked against a Home Affairs snapshot first. Only on a miss does DocuFii place a live call to the Department — and the record shows which path answered each verification.

HOW A VERIFICATION FLOWS

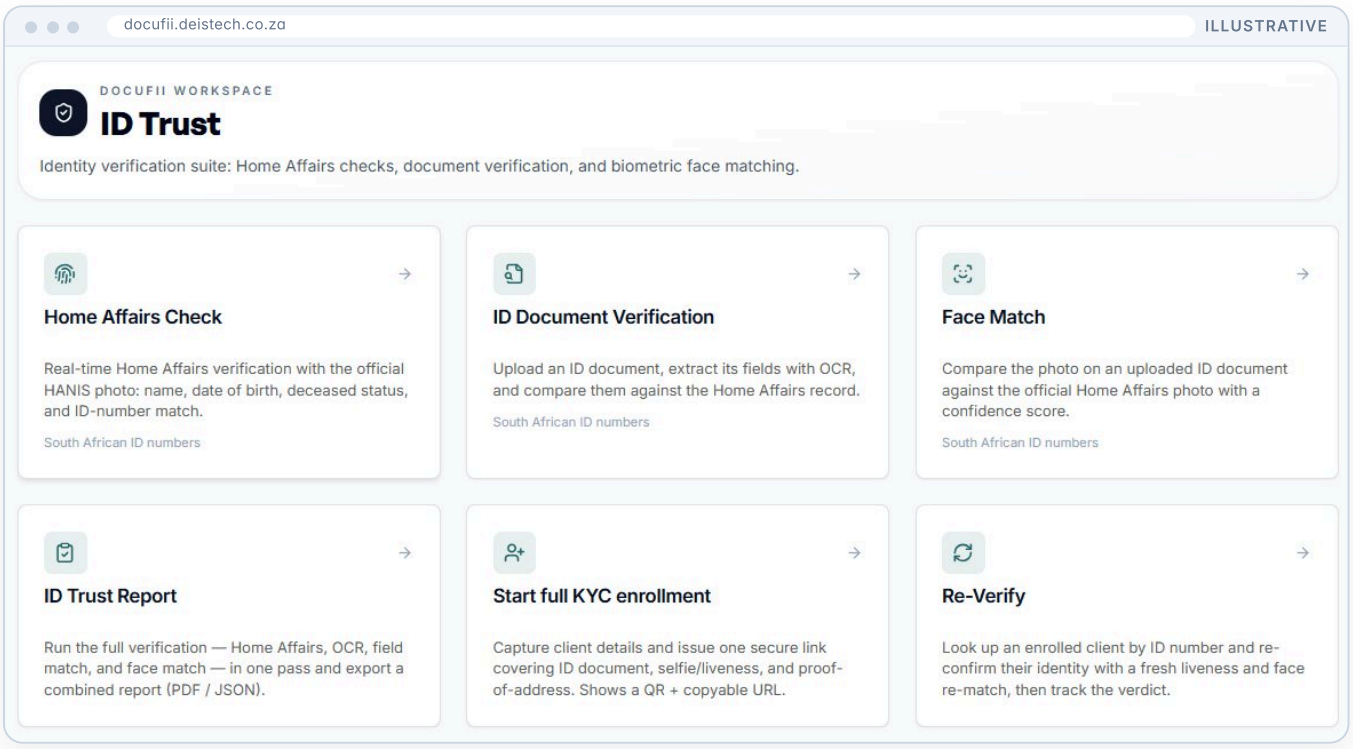

01 ID captured or keyed

02 Liveness and selfie

03 Snapshot checked first

04 Live Home Affairs call only on a miss

05 1:1 face match and verdict

ID Trust. Home Affairs check with the official HANIS photo, ID document verification, face match, a combined report, full KYC enrolment by secure link, and re-verification of an enrolled client.

WHAT COMES BACK

- Verified identity fields and status from Home Affairs.
- The Home Affairs photo, plus a 1:1 face-match score against the live selfie.
- A liveness result that defeats a photo-of-a-photo or a replayed video.
- A single verdict with confidence, and the full evidence bundle for your audit file.

YOU KEEP CONTROL OF THE ROUTING

Cache-first is the default. You may elect to route every verification direct to the Department instead — the choice is yours, disclosed and configurable per journey. A snapshot miss simply becomes the live call.

KYC ONBOARDING

Three levels of assurance. You choose per journey.

Every component is a separate check, so you can assemble your own journey. For teams who would rather not, three packaged bundles map to the assurance levels most South African institutions actually use — adding orchestration, a single call and the retained evidence file.

KYC Essential

Baseline identity assurance

- ID document verification
- Home Affairs ID verification (no photo)
- Liveness and 1:1 face match against the ID document
- Full audit trail

KYC Plus

MOST USED

Photo-verified identity

- Everything in Essential
- Home Affairs photo retrieval
- FaceView Plus matching against the Home Affairs image

KYC Advanced

Audit-ready, FICA-grade file

- Everything in Plus
- Proof of address verification
- AVS bank-account verification
- Audit-ready report pack

OR BUILD YOUR OWN

Each check is its own endpoint. Compose exactly the assurance a given product needs — a small airtime advance does not need the same file as a home loan.

- Home Affairs live
- Home Affairs snapshot
- Liveness
- Face match 1:1
- Document verification
- Proof of address
- AVS bank account
- Audit-ready report pack

Bundles never hide what the Department did

Bundles run cache-first. Where a verification falls through to a live Home Affairs call, that call is recorded — so the record always shows how each identity was actually verified.

KYB — BUSINESS VERIFICATION

Know the company, not just the signatory.

Onboarding a business means proving the entity exists, that it is in good standing, and that the people behind it are who they claim to be. DocuFii assembles CIPC, director, deeds, trace and credit data into a single KYB view with a risk summary.

KYB Lite

Existence and standing

- CIPC company report
- Company status verification

KYB Standard POPULAR

The entity plus the people

- CIPC report and status
- Up to two director enquiries
- Commercial trace
- KYB summary

KYB Enhanced

Full counterparty due diligence

- Everything in Standard
- Deeds enquiry
- Credit report
- AVS bank-account verification
- Risk summary

INDIVIDUAL ENQUIRIES, À LA CARTE

Company and people

CIPC company report · director and cross-directorships · consumer or commercial trace · credit report · deeds enquiry.

Address and bank

Proof of address verification · AVS bank-account verification · audit-ready report pack.

Background

Criminal check on hosted prints, or we book the capture · qualification (matric, NQR tertiary or institution direct) · employment confirmation.

Screening runs alongside

AML, PEP and sanctions screening can be attached to any individual or entity verification, with match review and disposition captured in the same audit trail.

AML — SANCTIONS, PEP & ADVERSE MEDIA

Screening that survives the audit, not just the onboarding.

Screen people and entities against global sanctions, PEP and adverse-media data. Every alert becomes a governed case with two-person sign-off, and every action is hash-chained so you can prove what was checked, by whom, and when.

WHAT MAKES IT DIFFERENT

- **Dual-provider corroboration** — two independent databases run at once. Hits confirmed by both are flagged, which cuts false positives and keeps you screening if one provider fails.
- **Four-eyes case workflow** — alerts promote to cases through a governed state machine. False-positive, true-match, escalate and prepare-STR dispositions all need maker-checker sign-off.
- **Tamper-evident audit** — every action hash-chained with SHA-256 and verifiable on demand, pinpointing any altered record.
- **Continuous monitoring** — enrol a subject once and new matches surface automatically by webhook as lists change.
- **Bulk and CSV** — up to 250 subjects per call, or upload a file, with per-row error tolerance for portfolio screening.

SCREENING SERVICES

Sanctions and PEP screen

Person or entity, with dual-provider corroboration.

SA Treasury and blacklist screen

Domestic lists checked alongside the global ones.

Adverse media and enhanced screen

For higher-risk subjects and enhanced due diligence.

Continuous monitoring

Per subject, for as long as the relationship lasts.

KYC and KYB case orchestration

The case that ties the registry and bureau checks together.

> A sanctions list is a moving target. A clean screen at onboarding says nothing about a designation added six months later — which is why FICA expects ongoing scrutiny, and why monitoring matters more than the screen.

The screening engine is jurisdiction-agnostic and runs anywhere. South African registry checks — Home Affairs, CIPC, credit bureaux, deeds, criminal and qualification — are bound to in-country providers and require a bureau agreement and POPIA consent.

USE CASE · FIC DIRECTIVE 8 OF 2023

Screen your own staff, or answer for it later.

Directive 8, issued by the Financial Intelligence Centre on 31 March 2023, obliges every accountable institution in Schedule 1 of FICA to screen employees for competence and integrity — before appointment and then on a risk cycle. Non-compliance carries administrative sanction under section 45C of up to R10 million for an individual and R50 million for a legal entity.

WHAT THE DIRECTIVE REQUIRES	HOW DOCUFII SATISFIES IT
Competence Qualifications	Verified with the issuing body — matric, NQR-listed tertiary and professional membership.
Competence Employment history and references	Employment confirmed directly with the previous employer's HR or payroll; competency-based references available.
Integrity Criminal record, with weight on dishonesty and financial crime	AFIS fingerprint clearance in two business days on hosted prints — or we book the capture appointment for the candidate.
Integrity Workplace fraud history	SAFPS commercial fraud register — fraudulent activity reported by a previous employer.
Integrity Is the employee a PEP or close associate	Sanctions, PEP and adverse-media screen with dual-provider corroboration.
Targeted financial sanctions Section 26A(3), before appointment and on every list update	TFS screen at appointment, then continuous monitoring by webhook as lists change.
Identity That the person is who they claim to be	Home Affairs verification with the official HANIS photo, face-matched to a live selfie.
Financial standing Where the role warrants it	Consumer credit report from the SA ID, dual-bureau for coverage and fallback.
Fit and proper Where the role is FAIS-regulated	DoFA record — date of first appointment, current and historical FSP detail, products approved by the FSCA.
Records Evidence kept on the employee personnel file	One consolidated case report per employee with every result, consent and a hash-chained audit trail.

Screening intensity proportionate to the role

The case engine holds a screening profile per risk class and triggers each rescreen automatically, so the cycle the directive expects runs without anyone maintaining a reminder list.

DIRECTIVE 8 · THE SCREENING PROGRAMME

Two packages. One recurring obligation.

Directive 8 is not a one-off project. The initial screen is the smaller task; the rescreening cycle and continuous sanctions monitoring are what you carry every year afterwards. DocuFii packages both.

Core package

Per employee · one consent-gated profile

- Identity — Home Affairs with photo and face match
- Criminal record clearance
- Qualification verification
- Credit report
- AML — sanctions, PEP and adverse media

Extended package

Per employee · for roles that warrant more

- Everything in Core
- Employment confirmation
- SAFPS commercial fraud register
- DoFA fit-and-proper record

THE RESCREENING CYCLE THE DIRECTIVE EXPECTS

HIGHER RISK

Annually

Senior management, staff handling client funds, compliance.

MEDIUM RISK

Every 3 years

Roles with moderate exposure to clients or funds.

LOWER RISK

Every 5 years

Roles with little exposure, still screened on cycle.

In year one the whole workforce is screened and enrolled in monitoring. Every year after, higher-risk staff are rescreened, roughly a third of medium-risk and a fifth of lower-risk staff come due, and continuous sanctions monitoring alerts by webhook for everyone. Periodic rescreens cover criminal and AML checks only. New joiners are screened as they are appointed.

PRICING

Call for a quote.

A Directive 8 programme is priced to your workforce — headcount, its split across risk classes and the package each role needs. We confirm a quote after a short scoping call.

sales@deistech.co.za
+27 82 761 9921

Criminal clearance is fingerprint-based (AFIS), returned in two business days, and assumes prints are captured at your premises by a certified biometric officer — we set that up during implementation. Directive 8 of 2023, Financial Intelligence Centre, published 31 March 2023 under section 43B of the Financial Intelligence Centre Act 38 of 2001. This summary is not legal advice.

SECURITY & DATA HANDLING

No data stored by default. Retention is your choice.

DocuFii processes each document and returns the result. It does not retain your files or the extracted data unless you explicitly switch history storage on for your organisation.

You control storage

History storage is opt-in and off by default. When on, documents auto-expire after a retention window (default 90 days) and are hard-deleted. Delete anything on demand, individually or in bulk.

Encrypted and isolated

Processed in Microsoft Azure, encrypted in transit and at rest with a per-organisation key — one tenant cryptographically isolated from another. Secrets in Key Vault via managed identity.

Compliance-aware

Retention, deletion and consent behaviour configurable to your posture — POPIA, FICA, GDPR and the NCA. Storage and deletion events captured in an audit trail.

CAPABILITY	HOW DOCUFII DELIVERS IT
API access	Fronted by Azure API Management with per-subscription keys and rate limits, over HTTPS.
Portal sign-in	Microsoft sign-in, with role-based access per team.
Third-party calls	Backend-to-backend — no hosted flows and no data leaving your journey.
Evidence	Every check records actor, action, entity, verdict and confidence. Audit-ready report packs on KYC Advanced and KYB Enhanced.
Deployment	Deis South African cloud, Deis infrastructure, or your own environment; also available on Azure Marketplace. When DocuFii runs in your infrastructure, documents stay in your environment; live checks still call Home Affairs, CIPC, credit bureaus and sanctions sources.
Certification	ISO 27001 and SOC 2: in progress.

ALIGNED TO THE FRAMEWORKS YOU ARE MEASURED AGAINST

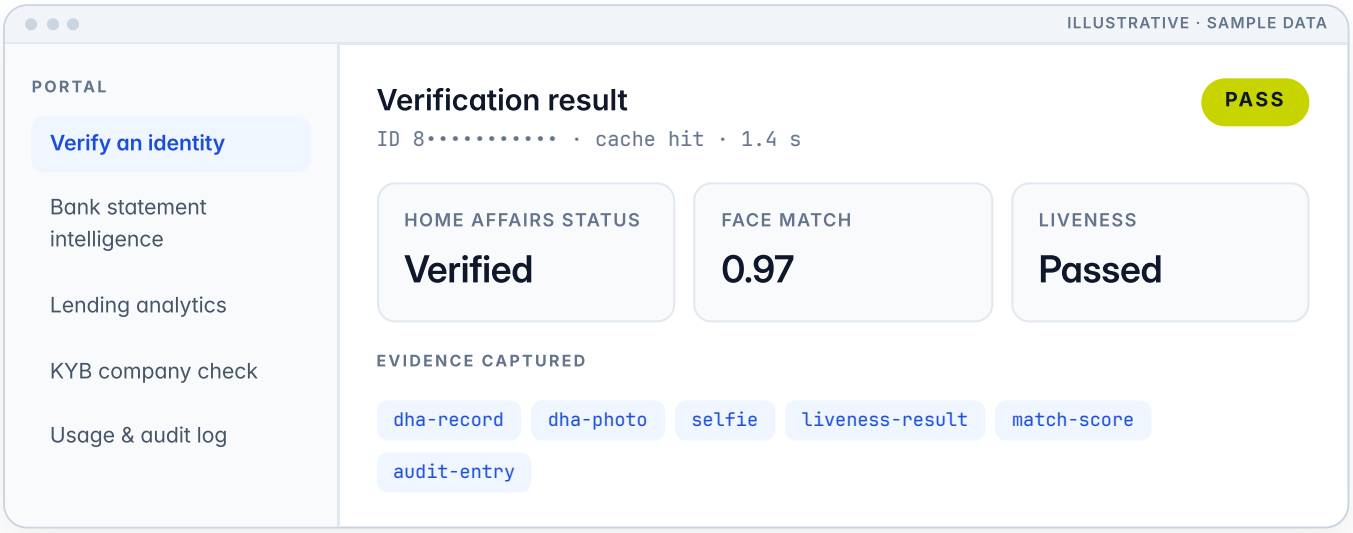

- POPIA
- FICA
- NCA
- GDPR
- Microsoft Azure hosted
- Per-tenant encryption
- Key Vault + managed identity

> The question a regulator asks is never “did you verify?” — it is “show me”. DocuFii is built so the answer is a query, not an archaeology project.

API AND NO-CODE PORTAL

Integrate it — or just sign in and use it.

Every subscription includes the DocuFii portal alongside the REST API. Operations teams verify in the browser from day one while your developers integrate in parallel — same platform, same audit trail, same invoice.

Live in an afternoon

Subscribe, activate a key, post a document. First extraction in under ten minutes; portal access needs no integration at all.

Usage you can see

Consumption and per-service breakdowns in the portal — cache hits and live calls shown separately.

Exceptions to people

Straight-through where the evidence clears; a reviewer queue with the full evidence bundle where it doesn't.

One REST API, one subscription key, HTTPS

Every operation accepts a file or a URL and returns structured JSON, with every call in the audit log.

API REFERENCE

Every endpoint, at a glance.

All operations accept a document (file or URL) and return structured JSON. Authenticate with your subscription key over HTTPS. Base path `/api`.

OCRV2 · FINANCIAL

POST /process/bankstatement	Transactions, balances, periods and totals.
POST /process/bankstatementandclassify	Adds per-transaction spend categorisation.
POST /process/bankstatement/report	Analyse, classify and embed a formatted PDF report.
POST /process/payslip	Earnings, deductions, net pay, gross-to-net checks.
POST /lending/analytics	Payslip vs statement — income match, DTI, refer/decline.

OCRV2 · IDENTITY

POST /process/id	Identity fields with automatic type detection.
POST /process/id-nationalid · id-smartid	National-ID and smart-ID card fields.
POST /process/passport · driverslicense	Passport and licence fields, including MRZ.
POST /process/id-{…}certificate	Birth, death, marriage, asylum, voter, residence.

OCRV2 · COMMERCE, MATCHING & ROUTING

POST /process/invoice · receipt	Invoice and receipt fields with line items.
POST /process/qualification	Qualification-certificate fields.
POST /process/id-match	Compare an extracted ID to supplied values — verdict and score.
POST /process/address-match · address-name	Match a person to an address document.
POST /process/auto	Detect the document type and route it.

OCRREAD · GENERIC & BULK

POST /ocr/read	Plain text with optional layout.
POST /ocr/extract	Fields shaped to a caller-supplied schema (22+ families).
POST /ocr/read/batch	Up to 10 documents synchronously.
POST /ocr/read/batch/async	Submit up to 1,000 documents.
GET /ocr/read/jobs/{jobId}	Status and results of an async batch job.

SCHEMA-DRIVEN EXTRACT FAMILIES · A GROWING LIBRARY

`bank-confirmation` `proof-of-address` `financial-statements` `individual-tax-return` `employer-tax-certificate` `tax-compliance-status` `property-tax-clearance` `company-registration` `director-appointment` `employment-contract` `employment-confirmation` `credit-agreement` `lease-agreement` `insurance-policy` `property-title` `trust-deed` `regulatory-licence` `medical-certificate` `settlement-offer`

USE CASES

Where teams put it to work.

The same platform, pointed at whichever verification problem is costing you the most today.

LENDING

Origination and affordability

A borrower uploads a bank statement, a payslip and an ID. DocuFii returns categorised transactions, verified income, disposable income, a debt-service ratio and a refer/decline signal — while the identity is verified against Home Affairs with liveness and a face match. What used to be a two-day underwriting file becomes a decision in under a minute, with the evidence attached.

`USES /bankstatementandclassify · /payslip · /lending/analytics · DHA verify · liveness`

RETAIL

Account opening

High-volume onboarding where every verification has to be fast and dependable for the product to work at all. Cache-first Home Affairs routing keeps verification fast at scale, liveness defeats the obvious fraud attempts, and AVS confirms the bank account belongs to the applicant before the first payment runs.

`USES DHA snapshot → live on miss · liveness · face match · AVS`

INSURANCE

Onboarding and claims

Quote-and-bind needs identity and address; a claim needs documents read and cross-checked. Extract the policy, the proof of address and the supporting invoices, match the claimant to the policyholder, and surface tamper signals before a human assessor ever opens the file.

`USES /process/id · address-match · /process/invoice · insurance-policy extract`

EMPLOYERS & HR

Vetting new hires

Verify a new hire's identity against Home Affairs, read the qualification certificate to structured fields, and capture the employment contract — replacing manual transcription and a filing cabinet with a dated, audited record for each employee file.

`USES DHA verify · /process/qualification · employment-contract extract`

WHO RUNS THESE JOURNEYS

- Banks & lenders
- Insurers
- Fintechs
- Retail credit
- Telcos
- Public sector
- Procurement teams

Start with one, add the rest

Most clients begin with the single journey that hurts most — usually identity verification or bank-statement affordability — then extend across the business once the integration is proven.

USE CASES · CONTINUED

Beyond onboarding.

Verification is not only a front-door problem — it runs through procurement, finance and fraud too.

PROCUREMENT

Supplier and counterparty onboarding

Before a supplier is loaded onto the payment run, confirm the company exists and is in good standing at CIPC, verify the directors, run a commercial trace and a credit report, and validate the bank account with AVS. The KYB summary and risk view become the approval record.

`USES KYB Standard / Enhanced · CIPC · director enquiry · deeds · AVS`

FINANCE

Accounts-payable automation

Batch a day's invoices and receipts into one asynchronous job of up to 1,000 documents, pull line-item JSON when it completes, and post straight into the finance system. Exceptions route to a reviewer with the extracted fields already populated.

`USES /process/invoice · /process/receipt · /read/batch/async`

FRAUD

Forensics and reconciliation

Catch the problems that pass a human eye: running-balance arithmetic that doesn't add up, a payslip whose gross-to-net is impossible, a name on the statement that isn't the applicant's, a document whose pixels have been edited. Tamper flags and confidence scores arrive before the reviewer does.

`USES /bankstatement/report · /payslip · /lending/analytics · document fraud check`

ANYTHING ELSE

Any document, your schema

Have a document type nobody's processor covers? Post it to the generic extractor with the fields you want back and receive clean JSON — the same pipeline and audit trail, shaped to your data model rather than ours.

`USES /ocr/read · /ocr/extract (22+ families)`

WHAT CHANGES, MEASURABLY

Days → minutes
Onboarding turnaround.

No re-keying
Capture effort removed.

Earlier
Fraud caught before human review.

One invoice
Vendors consolidated.

GETTING STARTED

Live in an afternoon. Proven in a fortnight.

1
Scoping session
Map your journeys, documents, volumes and assurance levels, and agree cache-first or direct routing.

2
Sandbox and key — day one
Sample documents and a Postman collection. First extraction in under ten minutes.

3
Pilot on real volume
Run a live slice of your book and compare the results.

4
Integrate or use the portal
Developers integrate while operations already works in the portal.

5
Scale and extend
Add document intelligence, KYB or screening. No new contract, key or integration.

IMPLEMENTATION INCLUDES

Onboarding
Configuration of your tenant, teams and keys.

API integration
Support for your developers through go-live.

Custom workflows
Journeys configured to your assurance levels.

White-labelled
A verification journey in your own brand.

Data migration and bulk historical runs are scoped separately.

TWO PLATFORM TIERS

Standard platform
The full platform at any volume

- Unlimited portal users and teams, role-based access
- Full API access across every service and endpoint
- Usage dashboards, audit log, evidence retrieval and multi-entity isolation
- Support 08:00–17:00 SAST, Monday to Friday — P1 within 4 business hours

Enterprise platform · 24/7
For verification outside office hours

- Everything in Standard
- 24/7 on-call engineer for P1 — 30 minutes, any hour
- Named technical account manager; uptime SLA backed by service credits
- Dedicated sandbox and test tenant; quarterly service review

PRICING

Call for a quote.

Send us your monthly verification and document volumes and we return a quote — and a sandbox key to test it against.

sales@deistech.co.za
+27 82 761 9921

NEXT STEP

Let’s test this against your real volumes.

Send us your monthly verification and document volumes and the journeys that hurt most today. We will map them to the checks and bundles that answer them, return a quote, and give you a sandbox key to prove it on your own documents.

PRICING

Call for a quote.

DocuFii is priced to your needs — the checks and documents you use, your volumes, your platform tier and where it is deployed. We confirm a quote after a short scoping call.

sales@deistech.co.za
+27 82 761 9921

WHAT WE SCOPE WITH YOU

- Which journeys you run: documents, identity, KYC, KYB, screening.
- Monthly verification and document volumes.
- Assurance level per journey, and cache-first or direct routing.
- Where you want it deployed: Deis cloud, Deis infrastructure or yours.
